European Brain Council cordially invites you to the Seminar

‘Criteria for success: The future of collaborative brain research’

Brain research is at the frontier of modern science.

The Seminar will provide participants with greater insights into why collaborative research could be a new model for developing patient-centric medicines in neuroscience.

A better understanding of the brain is desperately needed to accelerate the development of new medicines and better treatments. This will be a unique opportunity to discuss the right policies promoting cutting edge research in Europe.

This event is part of the campaign Year of the Brain in Europe.
